Dear Madam, Sir,

On 08/02/2016 you have been granted a Belgian national authorization to place on the Belgian market the following biocidal product:

**Klercide Sporicidal Low Residue Peroxide** - **Authorization number 216B**

In view of the pending Union Authorization application submitted to the European Chemical Agency on 19/01/2017 and according to the transitional measures as laid out in article 89, §2 of the Biocidal Product Regulation (EU) No 528/2012, we can provide you with a prolongation of making your product **Klercide Sporicidal Low Residue Peroxide** available on the Belgian market until 3 years after the date of approval of the last active substances to be approved in this given biocidal product. **Your product may remain on the Belgian market**, under the same conditions as those mentioned in the Belgian authorization **216B**, and at the latest until **01/02/2020**.

This letter is the **official notification of the new date of validity** of the mentioned Belgian authorization **216B**. The biocidal product concerned will continue to be included in the list of the authorized biocidal products, which can be found at [www.biocide.be](http://www.biocide.be). The already granted authorization will not be amended. You can use this letter as proof of the validity of the existing authorization.

This letter remains **valid until the Union Authorization** is granted and will terminate on **01/02/2020** at the latest. The granted Union Authorization will provide a period of grace to continue to market the biocidal product concerned with the current authorization number **216B** (180 days for the making available on the Belgian market and an additional maximum period of 180 days). If the Commission shall adopt an implementing decision stating that the Union Authorization has not been granted, the biocidal product concerned will no longer be made available on the market 180 days after the implementing regulation has been adopted. The use of existing stocks remains authorized until a maximum of 365 days after the date of adoption of the Commission decision.

Sincerely,

Anne-France RIHOUX
Head of the biocides service
